Research Interests

My research focuses on multi-modal remote sensing and computer vision, aiming to build intelligent systems for understanding Earth observation data. My work spans three core areas: 1) Vision-Language Multi-Modal Learning: I developed the EarthVQA series for visual question answering and comprehensive understanding (EarthVQA, EarthVQANet, EarthVL, etc). 2) Large-scale Dataset Construction: I created influential benchmark datasets for domain adaptive semantic segmentation (LoveDA, LoveCS), disaster response (DisasterM3) and long-term series urban understanding (DynamicVL). 3) AI4Earth Applications: Grounding AI techniques to AI4Earth problems is interesting and challenging. I proposed CityVLM for sustainable urban development and our damage assessment solution won 1st in 'AI for Earthquake Response Challenge'.
