Research Interests

My research focuses on multi-modal remote sensing and computer vision, aiming to build intelligent systems for understanding Earth observation data. My work spans three core areas: 1) Vision-Language Multi-Modal Learning: I developed the EarthVQA series for visual question answering and comprehensive understanding (EarthVQA, EarthVQANet, EarthVL, etc). 2) Large-scale Dataset Construction: I created influential benchmark datasets for domain adaptive semantic segmentation (LoveDA, LoveCS), disaster response (DisasterM3) and long-term series urban understanding (DynamicVL). 3) AI4Earth Applications: Grounding AI techniques to AI4Earth problems is interesting and challenging. I proposed CityVLM for sustainable urban development and Our damage assessment solution won 1st place in 'AI for Earthquake Response Challenge', and GeoFM solution won 2rd place in 'Reaching new heights with GeoFM Challenge'.
